

PRESS RELEASE

REpower and Suzlon combine operations in the Australian market

Melbourne, October 5 2011. REpower Australia and Suzlon Energy Australia today officially commenced combining operations in the Australian market. The new entity, REpower Australia, will offer both Suzlon and REpower products and EPC services ensuring the optimum product choice for customers.

Dan Hansen, the new CEO and Managing Director of REpower Australia, emphasized the benefits for customers and stakeholders that will be delivered through this new vehicle: "With our combined expertise and product offering, we create a formidable player in the country's wind industry and strengthen our offering in an important and well established market," he said. "REpower Australia is now the largest EPC provider of wind power plants in Australia and provides a 'one-stop shop' solution for our customers."

"The collaboration is a logical extension of the existing Sales Agency and Consultancy agreements between the Australian entities and will bring together the strengths of the two teams to a sharper competitive edge, enhancing their capability to serve their customers", said Jan Gasche, former Managing Director of REpower Australia, who returns to REpower headquarter after a short hand over period.

REpower Australia will continue to deliver a seamless service to the combined customer base; contracts and legal agreements will be continued and remain unaffected. The whole process of intensified collaboration is limited to the

Australian market and does not affect the independent worldwide operations of Suzlon and REpower.

About REpower Australia:

REpower Australia is a fully owned subsidiary of German REpower Systems SE, which is a part of the Suzlon Group. REpower Australia now combines two of the world's most successful manufacturers and constructors of wind turbines to provide the Australian market with an unrivaled product range and unsurpassed EPC capabilities.

REpower Australia offers the Australian wind energy market turbines suitable for almost any location with a product range spanning rated outputs of 1.8 MW to 6.15 MW and rotor diameters of 82 meters to 126 meters. REpower Australia also offers a fully wrapped Engineering, Procurement and Construction (EPC) turnkey delivery of sustainable power plants, plus ongoing service and maintenance.

Delivering more than just wind turbines – the REpower Australia team brings together 285 experienced power plant professionals with long standing wind industry expertise and capabilities, backed up by proven, robust procedures and an Integrated Management System certified to ISO 9001, ISO14001 OHSAS18001 and AS/NZS 4801 standards.
